In Pittsburgh’s own version of “Jurassic Park,” the Carnegie Museum of Natural History project known as DinoMite Days has reintroduced dinosaurs to the region. Herbivores or carnivores, these dinos are of the man-made variety and decidedly viewer-friendly.

Three types of base dinosaurs — T. rex, Stegosaurus and Torosaurus — are being reimagined by everyone from professional artists to school children and placed throughout the city and suburbs. Some appear in herds, some are singular (as in Shaler and Squirrel Hill). We’ve heard from many readers who are eager to hunt the DinoMite dinosaurs with the aid of a lot or map, so we thought we’d add some fun to the adventure by making a game of it.

It’s easy, and here’s how it goes:

• On this page, find your map, with a dinosaur footprint representing more than one dinosaur in an area and the T. rex, Stegosaurus or Torosaurus representing individual dinosaurs. These trons are numbered 1 through 38.

To proceed on your safari:

• Use your mouse to click on the numbered icons (footprints or dinosaurs) to link to a description of the dinosaurs at that location.
• Pick an area, and begin your search. Happy hunting.
